8000 BC

End of last Ice Age

8000 BC

---

The forebears of the Mayan  
Civilization inhabited their  
territory from around end  
of the last ice age

8000 BC

Waters now issuing from springs of the Sinai are over 10,000 yrs old.

AYUN MUSA near Suez is an example. A large Aquifer exists under the desert. AYUN MUSA means Springs of Moses. It was too bitter for Israelites to drink. The aquifer was probably formed in the last glacial age.

8000 BC

---

Man began to select, breed,  
domesticate and cultivate various  
species of plants and animals

8000 BC  
10,000 Y A

As the ice age became over. Ice melted. Continents once weighted by ice have been rising for the last 10,000 yrs, overwhelming the earthquakes that want to force the North Pole toward Tokyo. Measurements since 1900 show the North Pole migrating in the opposite

direction due to the rising of the  
land forms

However - subduction - which  
sends plates sinking into the  
mantle has embolled the pole's  
position over the last 100 million  
years.

8070 BC

Vast quantities of old water  
still exist under the  
Sahara Desert.
